<b>Programme</b>	<b>LEVEL 5 EXTENDED DIPLOMA IN DATA SCIENCE</b>		
<b>Unit Number/ Unit Title</b>	UNIT 8 DATA MINING AND BIG DATA ANALYTICS		
<b>Cohort Code:</b>	L05DMBD-U8		
<b>Unit Level</b>	Level 5		
<b>Total GLH</b>	Total qualification time 200/ Total Guided learning hours 90/ Self-guided learning hours 110		
<b>Credits</b>	20 CATS/ 10 ECTS		
<b>Lecturer</b>			
<b>Start Date</b>		<b>End Date</b>	

<b>Unit Aims</b>	<p>This module aims to introduce students to the concepts and techniques of data mining and analytics for extracting knowledge from large datasets. Students will explore key methodologies in data mining, including clustering, classification, and association rule mining. The module will cover practical applications of these techniques in various domains, enabling students to uncover patterns and insights from large datasets. By the end, they will be equipped to apply data mining tools effectively, enhancing their ability to make data-driven decisions.</p>
<b>Differentiation Strategies</b> <i>(e.g. planned activities or support for individual learners according to their needs)</i>	<p>The total number of students to be in the lesson is approximately 20. This is a multicultural group of students predominantly between the ages of 24 – 45, with numerous ethnic, gender, and creed background. These are UK academic level 5 students; hence it is assumed that they have practical, theoretical, or technological knowledge and understanding of a subject or field of work to find ways forward in broadly defined, complex contexts. These students must be able to generate information, evaluate, synthesise the use information from a variety of sources. Various approaches to addressing the various identified students needs will be adopted throughout the lesson. Such will include:-</p> <ol style="list-style-type: none"><li>1. Progressive tasks</li></ol>

	<ol style="list-style-type: none"> <li>2. Digital resources</li> <li>3. Verbal support</li> <li>4. Variable outcomes</li> <li>5. Collaborative learning</li> <li>6. Ongoing assessment</li> <li>7. Flexible-pace learning</li> </ol>
<b>Equality &amp; Diversity</b>	Variety of teaching techniques will be employed to ensure that the needs of each individual learner are met.
<b>Safeguarding &amp; Prevent</b>	Safeguarding policies and the Prevent duty are strictly observed to ensure the safety, well-being, and inclusivity of all students and staff.
<b>Health &amp; Safety</b>	SIRM H&S policies will be maintained.

Learning Outcome	Assessment Criteria
<b>LO1.      1. Understand data mining concepts and methods.</b>	1.1 Define data mining and its applications in data science. 1.2 Explain different data mining techniques and algorithms.
<b>LO2.      2. Develop skills in analyzing big data sets.</b>	2.1 Apply data preprocessing techniques to prepare data for analysis. 2.2 Implement data mining algorithms to discover patterns and trends in big data.
<b>LO3.      3. Apply data analytics to real-world scenarios.</b>	3.1 Evaluate the effectiveness of data mining models. 3.2 Interpret findings and make data-driven decisions based on data analytics results.
