

**INTERNATIONAL QUALIFICATIONS
AND ASSESSMENT CENTRE (IQAC)**

Programme	Level 6 Diploma in Data Science	
Unit Number/ Unit Title	UNIT 2 ADVANCED MACHINE LEARNING AND DEEPMLEARNING	
Cohort Code:	L06AMLD-U2	
Unit Level	Level 6	
Total GLH	Total qualification time 200/ Total Guided learning hours 90/ Self-guided learning hours 110	
Credits	20 CATS/ 10 ECTS	
Lecturer		
Start Date		End Date

Unit Aims	This unit delves into advanced supervised and unsupervised learning methods, neural networks, and deep learning architectures for complex data types including images, text, and time series. Students will explore advanced supervised and unsupervised learning techniques, focusing on the application of neural networks and deep learning architectures. The unit will cover various complex data types, such as images, text, and time series, allowing students to develop models that can effectively analyze and interpret these data forms. By the end of the course, students will have the skills to implement and evaluate deep learning solutions for diverse applications, enhancing their understanding of modern machine learning practices.
Differentiation Strategies <i>(e.g. planned activities or support for individual learners according to their needs)</i>	The total number of students to be in the lesson is approximately 20. This is a multicultural group of students predominantly between the ages of 24 – 45, with numerous ethnic, gender, and creed background. These are UK academic level 5 students; hence it is assumed that they have practical, theoretical, or technological knowledge and understanding of a subject or field of work to find ways forward in broadly defined, complex contexts. These students must be able to generate information, evaluate, synthesise the use information from a variety of

	<p>sources. Various approaches to addressing the various identified students needs will be adopted throughout the lesson. Such will include:-</p> <ol style="list-style-type: none"> 1. Progressive tasks 2. Digital resources 3. Verbal support 4. Variable outcomes 5. Collaborative learning 6. Ongoing assessment 7. Flexible-pace learning
Equality & Diversity	Variety of teaching techniques will be employed to ensure that the needs of each individual learner are met.
Safeguarding & Prevent	Safeguarding policies and the Prevent duty are strictly observed to ensure the safety, well-being, and inclusivity of all students and staff.
Health & Safety	SIRM H&S policies will be maintained.
Learning Resources	Teaching and Learning Materials
	<ul style="list-style-type: none"> • Géron, A. (2022). Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow (3rd ed.). O'Reilly Media. • Chollet, F. (2021). Deep Learning with Python (2nd ed.). Manning. • Goodfellow, I., Bengio, Y., & Courville, A. (2016). Deep Learning. MIT Press.

Learning Outcome	Assessment Criteria
LO1. LO1. Compare and evaluate advanced machine learning models.	<p>Exam:</p> <p>1.1 Analyse ensemble models (e.g., Random Forest, XGBoost). 1.2 Evaluate performance using cross-validation and ROC/AUC.</p>
LO2. LO2. Design and implement deep learning models.	<p>Programming Project:</p> <p>2.1 Develop neural networks using TensorFlow or PyTorch. 2.2 Train and evaluate models for image or NLP tasks.</p>
LO3. LO3. Analyse real-world datasets using unsupervised learning.	<p>Case Study:</p> <p>3.1 Apply clustering (K-means, DBSCAN). 3.2 Use dimensionality reduction techniques (e.g., PCA, t-SNE).</p>
LO4. LO4. Optimise machine learning workflows.	<p>Presentation:</p> <p>4.1 Compare GPU and CPU performance. 4.2 Demonstrate use of regularisation and hyperparameter tuning.</p>

No	Learning Outcome / Topic	Learning and Teaching Activities	Which assessment criteria does the session relate to?	Day/month/year/ signature
1.	Object-Oriented Programming (OOP) in Python	Object-Oriented Programming (OOP) in Python Classes, inheritance, magic methods (<code>__init__</code> , <code>__str__</code>)	LO1: Advanced Python for Data Science	
2.	Advanced Data Structures	Advanced Data Structures Namedtuples, defaultdict, custom iterators	LO1: Advanced Python for Data Science	
3.	NumPy Mastery	NumPy Mastery Vectorization, broadcasting, advanced indexing	LO1: Advanced Python for Data Science	
4.	Pandas Optimization	Pandas Optimization Efficient DataFrame operations, <code>eval()</code> / <code>query()</code>	LO1: Advanced Python for Data Science	
5.	Parallel Computing with Dask	Parallel Computing with Dask Handling out-of-core datasets, Dask DataFrames	LO1: Advanced Python for Data Science	
6.	Modular Code Design	Modular Code Design Functions, modules, packages, <code>__init__.py</code>	LO2: Software Development Practices	
7.	Documentation Best Practices	Documentation Best Practices Docstrings, Sphinx, MkDocs	LO2: Software Development Practices	
8.	Half-Term Exam	<ul style="list-style-type: none"> - Review of LO1 topics - Practice questions and mock assessment - Half-term assessment based on LO1 (theory) 	LO1 LO2	

9.	Unit Testing & Debugging	Unit Testing & Debugging pytest, unittest, logging	LO2: Software Development Practices	
10.	Git & Collaborative Workflows	Git & Collaborative Workflows Feature branches, PRs, resolving merge conflicts	LO2: Software Development Practices	
11.	CI/CD for Data Science	CI/CD for Data Science GitHub Actions, model training pipelines	LO2: Software Development Practices	
12.	Working with REST APIs	Working with REST APIs requests library, authentication (OAuth, API keys)	LO3: API Integration & Data Pipelines	
13.	API Rate Limiting & Caching	API Rate Limiting & Caching Retry logic, @lru_cache	LO3: API Integration & Data Pipelines	
14.	Final Exam Preparation & Review	- Comprehensive review of all learning outcomes - Practice questions and revision of key topics		
15.	Final Exam	- Final-term assessment covering all learning outcomes (theory and practical elements)		
16.	Feedback & Reflection	- Review of final exam - Individual feedback on performance - Reflective discussion on key learning points		
17.	Web Scraping for Data	Web Scraping for Data BeautifulSoup, Scrapy, ethical considerations	LO3: API Integration & Data Pipelines	
18.	Automated Data Pipelines	Automated Data Pipelines Cron jobs, Airflow DAGs	LO3: API Integration & Data Pipelines	

19.	Data Quality Checks	Data Quality Checks Great Expectations, schema validation	LO3: API Integration & Data Pipelines	
20.	Functional Programming Concepts	Functional Programming Concepts Pure functions, immutability, side effects	LO4: Functional Programming for Data	
21.	Lambda Functions & Map-Reduce	Lambda Functions & Map-Reduce <code>map()</code> , <code>filter()</code> , <code>reduce()</code>	LO4: Functional Programming for Data	
22.	List/Dict Comprehensions	List/Dict Comprehensions Nested comprehensions, memory efficiency	LO4: Functional Programming for Data	
23.	Half-Term Exam	Project End-to-end data application with all concepts		
24.	Generators for Large Data	Generators for Large Data <code>yield</code> , generator expressions	LO4: Functional Programming for Data	
25.	Concurrency with <code>asyncio</code>	Concurrency with <code>asyncio</code> Async API calls, event loops	LO4: Functional Programming for Data	
26.	Performance Optimization	Performance Optimization Profiling (<code>cProfile</code>), memory management	LO5: Integration & Capstone	
27.	Error Handling Strategies	Error Handling Strategies Custom exceptions, sentinel values	LO5: Integration & Capstone	
28.	Cross-Paradigm Comparison and Real-World Data Pipeline	Cross-Paradigm Comparison Benchmarking OOP vs. functional approaches Real-World Data Pipeline API → ETL → Analysis → Visualization	LO5: Integration & Capstone	
29.	Final Exam Preparation & Review	LO1, LO2, LO3, LO4	LO1, LO2, LO3, LO4	
30.	Final Exam		LO1, LO2, LO3, LO4
